where design & lifestyle meet pure excitement

Tender 08 represents a logical development of our successful Tender 06 model. By sticking to the proven and award winning design and style of the Tender 06, the new Tender 06J has been engineered and designed from scratch taking into account the experiences and feedbacks of more than 30 satisfied tender owners as well as knowledge taken from its big brother Tender 08. By dropping the outboard engine concept, the Tender 06J can even more consequently target at those water sports enthusiasts who relish the best in design and lifestyle. The new concept is not only giving us total design and style/color control of every inch of the boat but at the same time enables a completely new arrangement of the deck with an almost central steering position and an additional sunbathing area at the rear of the boat. The new waterjet propulsion unit and the extra power added, the Tender 06J guarantees the ultimate in driving pleasure aboard a chic and stylish vessel. Get you adrenalin ready!

The result is a boat that is simple to operate and whose unique handling and overwhelming performances ensures unprecedented driving pleasure. The daring, stylish lines, the selection of only the finest materials and fittings and the high level of customisability make Tender 06J the ideal boat for aesthetes and people in search of the unusual who enjoy getting away from the madding crowd. The boat offers not only impressive performance and a wealth of driving pleasure (agility, tight turning circles, etc.), but also puts in a rugged showing in rough waters, which makes it particularly interesting for use in coastal areas or as a tender for mega yachts.

Thanks to the use of sophisticated high-tech materials and construction techniques and an uncompromising design and finish aimed at performance and fun, the weight of the boat sets new standards for its class. Its light weight, slim lines and the jet propulsion make this boat extremely simple to handle – both on the water and out of it. The boat is straightforward to tow and get into and out of the water using any slip. Three lifting eyes make it child's play to lift either with a harbour-side crane or the deck crane of a yacht.

The boat is equipped with the Weber MPE 750 Marine TC-HO engine. The turbo charged 143 horsepower (100 hp for operation on Swiss lakes) and the Weber-Jet 148 accelerate this lightweight vessel to planing speed in no time and put it into reach of 40 kn top speed. The elaborate design, the lightweight construction and the jet propulsion enable the most radical turns for those who dare.

Water-skiing and wakeboarding enthusiasts will revel in both its performance and the stern platform which makes getting in and out a cinch. The stern-mounted extendible bathing ladder, the self-draining cockpit and the premium-grade teak used on all horizontal surfaces ensure carefree bathing. The two sunpads over the foredeck and engine compartment can be fitted with matching upholstery. A built-in icebox and awnings deliver comfort on hot days.

To enable owners to give their boats that special individual touch, the paintwork of Tender 06J is available in all colours or colour combinations. An extensive programme of options ensures a high level of customisation and adaptation to specific requirements and intended use.

Get in touch with us to arrange a trial run and to discover just how contagious enthusiasm for Tender 06J can be!
